

We help patients regain lost smiles.

A smile is more than just a collection of teeth. It is a powerful tool when interacting with others, both socially and professionally. When a person loses their smile, there is often a profound loss of self-esteem and social confidence.

We now can go from initial consultation to implant placement to provisional restoration within 24 hours. This allows the patient to leave with a full smile after 24 hours.

James W. Gibney, DMD

## What is 24 Hour Teeth?

There are two distinct parts: the first is an in-office crown and bridge lab that allows us to fabricate permanent restorations in 24 hours, the second is a surgical application that allows a patient to have a full set of implants with provisional restorations in 24 hours.

### How is it done?

Dr. Gibney uses a revolutionary technique which combines cone beam CT technology, IV sedation, and digital design and fabrication of restorations.

"You realize how much of an impact 24 hour teeth makes. You get your confidence back. You don't second guess yourself when interacting with people. It definitely changed my life."

-Ashley, a 24 hour teeth patient

## 24 Hours, One Location

Dr. Gibney is able to complete all steps of the 24 Hour Teeth process at his office. For the crown and bridge patient this means permanent teeth within 24 hours. For select implant patients this means a full set or provisional restorations within 24 hours. Call us at (352) 686-4223 to schedule your consultation!

**We know that every great smile - your smile - is the sign that we've done our job to provide the highest level of care in the industry.**
